

Biophysical Journal Call for Papers

Special Issue: Modeling Biology at Multiple Scales: From Macromolecules to Cells, Dedicated to Jie Liang

Editors: *Ao Ma, University of Illinois Chicago*
Ruth Nussinov, National Cancer Institute, National Institutes of Health
Jianhan Chen, University of Massachusetts Amherst
Jianhua Xing, University of Pittsburgh

This special issue is dedicated to the memory of Jie Liang, a brilliant scientist who made important contributions across diverse fields in biophysics, from proteins to chromosomes to cells. His work was characterized by an innovative computational approach and was often performed in close collaboration with experimental colleagues.

To honor his legacy and reflect the breadth of his impact, we welcome submissions on studying biological systems and processes across all spatial and temporal scales, including but not limited to proteins, nucleic acids, chromosomes, cellular reaction networks, and cells. Submissions may involve modeling, simulation, and/or experimental approaches.

We also encourage perspective or review articles on these topics. If you are interested, please contact the editors Ao Ma (aoma@uic.edu) and Jianhua Xing (xing1@pitt.edu).

Deadline for submission: November 30, 2025

- Instructions for authors can be found at: <https://www.cell.com/biophysj/authors>.
- Please include a cover letter stating that you would like to contribute to the Modeling Biology at Multiple Scales special issue and please describe why the work fits into the issue.
- Normal publishing charges will apply.
- Questions can be addressed to the BJ Editorial Office at BJ@biophysics.org or to (240) 290-5600.

July 23, 1964 – December 23, 2024

To submit, visit <https://www.editorialmanager.com/biophysical-journal/>
